

Whatcom Manufacturing Inc.

Orchard Mulch Spreaders

850-Orchard

A one time pass application of compost/mulch is now easily possible with the Whatcom Orchard Mulch Spreader!

Whatcom Manufacturing's Mulch Spreaders are specifically designed and engineered for orchards!

The inverted V shaped box is ideally suited for maximum clearance through tree rows with minimum branch damage. The lower and narrower design greatly increases stability on steep side hills.

The Orchard model comes standard with "Tor-Flex" tandem axles to smoothly carry heavy loads over rough terrain. Our high speed cleated belt pours compost or mulch onto the root zone band strips as far as 10 feet out!
