

WHATCOM FERTILIZER SPREADERS

Narrow Profile Berry Model

WHATCOM MANUFACTURING'S latest Fertilizer Spreader Model is specifically designed for the BERRY grower. Narrow width and higher capacity will accommodate mature fields and minimize time and trips required to cover larger acreage plantings. Our twin belt discharge evenly spreads fertilizer on two rows simultaneously. This feature in conjunction with the ground driven floor chain provides for concise application rates regardless of ground speed.

WHATCOM MANUFACTURING'S Narrow Profile Berry Model Fertilizer Spreader has these unique features, custom built for the blueberry grower's needs.

- Extra narrow design.
- Stainless Steel construction.
- Dual Belt-discharge for two row application.
- Flotation tires with spring suspension.
