

Whatcom Manufacturing Inc. Prop Agitator

35' Agitator

We have been producing quality built agitators for over 20 years, and our experience has helped us to build a durable, efficient machine.

Agitators can be ordered in sizes from 35' up to 50' in length. Each agitator uses a large diameter slow speed propeller constructed of Hardox 500 steel plate. Each balanced for years of vibration free service.

All bearings are grease lubed from 1 grease band at the front of the agitator. A Heavy Duty ball bearing at front, nylon sleeve bushings in the stem, and a bronze sleeve bearing at the back provide ample shaft support.

35' Agitator in the up position
