

WHATCOM

Rear Unload Stockpiler

Discharge out the front as well

Whatcom Rear Unload was the first of its kind when we started making this model in 2001.

Just one of the special wagons we can build. This machine is designed for the farmer that wants to transport and stockpile material to another location, yet be able to spread using the front discharge.

Full independent hydraulic system runs the discharge with high speed cleated belt, and dual motors on the reversible floor chain. HD Aircraft tires, and WR78 floor chain ensure long life.

The rear door has a latching system so when loading, and when using the front discharge the door is locked shut. But when needed to be free, a simple latch system lets you unlock it and it will swing freely.

This model is available in nearly any size.

“CUSTOM BUILT EQUIPMENT -- BUILT TO LAST!”
